Stretcher Frame 1500

The GOframe Stretcher Frame 1500 is available in different lengths ranging from 10 to 36 inches. For odd sizes and lengths beyond 36", the stretcher bars are designed to be cut and re-assembled.

GOframe Stretcher bars are made from the best grades of North American basswood. With museum quality, low resin and lignin content, the stretcher bars are stable and durable. There will be *no warp* or *shrinkage* after the canvas is applied to the stretching frame.

Easily stretch your print or gallery wrap canvas with the GOframe Stretcher Frame 1500!

Easy to Make!

GOframe Stretcher frame is quick and easy to assembly. The high quality adhesive tape eliminates the need for pliers. The patented clamps are reusable and ensure that the frames will be perfectly square and prevent the adhesive tape from touching the canvas. U-Shaped fasteners help to create those neat and perfectly folded corners. The tabs snap easily into place providing constant tension that creates a drum-like feel to your canvas.
